

DEMAND MANAGER

This helpful tool forms part of our Trading and Planning module and gives you increased visibility and control over your order volumes and stock management.

FEATURES INCLUDE:

- ✓ Create purchasing, sales and production forecasts. Enter or import your required product volumes into these along with the assigned and remaining volume required for each product for the specified time periods and track your stock levels and demand as you go.
 - ✓ The assigned volume is automatically linked and updated in other Foods Connected tools saving you time duplicating tasks.
 - ✓ Send required product volumes within your forecast directly through to our Purchasing Manager and select your chosen template, facilitating the quick sending of a purchasing enquiry.
 - ✓ Share created forecasts with your suppliers through Foods Connected, allowing for increased visibility of potential future orders.
- Our Trading Management module with each of its tools interconnects and integrates seamlessly with our Supply Management modules and Quality Management modules and are available on the Foods Connected single pane of glass platform.
